migliorquadro

Migliorquadro canvas stretching machine is equipped to **stretch and staple** canvas on frame of different size from as small as **8"x8" up to 47" x 47"**. To increasing productivity, the machine can **simultaneously finish multiple frames and canvas in the same size or width**.

Unique to the Photostory system, the Migliorquadro does not require additional attachments or auxiliary accessories such as a mold or the need to use specific sourced frames.

The smart system automatically detects the key parameters, such the frame height and the number of frames, and adjusts itself accordingly. Its built-in sensors and guides determine the user's frame(s) specifications while its touch display allows for additional adjustments.

This machine eliminates the waves and wrinkles often experienced in the manual process and ensures professional finish.
